- Test libraries/frameworks: JEST, React testing library and Cypress.
- Task runners: Gulp4
- CI/CD: Working knowledge of Jenkins
- Cloud Fundamentals: Google Cloud Platform (GCP), CMS: Strapi

Key Engagements

- Developing an application that facilitates applying credit to finance a vehicle purchase for Europe's leading automobile E-commerce platform. The range of responsibilities undertaken during the tenure includes - backlog management, process definition, development, QA, and delivery management.
- Designed and built a digital platform to simplify tenant and landlord management functions for the leading USA-based Commercial Real Estate organization. The role involved gathering requirements, identifying resolutions to the existing problems/challenges, developing technical specifications and executing the same. Also developed an internal tool which reduced the TTM for a website from 6 weeks to 1.
- Developed a secure online platform for an Indian Pharma client. The scope of responsibilities undertaken included – understanding/analyzing the requirements, defining priorities, development, quality analysis, product demonstrations and deployment.
